

MANUFACTURING RELIES MORE AND MORE ON INTELLECTUAL PROPERTY AND PRODUCTION DATA FOR COMPETITIVENESS.

The fourth industrial revolution, often referred to as Industry 4.0, is changing the way manufacturers compete and win. For many, with the focus shifting to IoT, optimizing the supply chain, and other revolutionary actions, **intellectual property (IP)** still remains the crown jewels which differentiate a manufacturer's products and often its competitiveness. Whether engaged in technology, automotive, pharmaceutical, electronics, or other areas, protecting IP with Covax Polymer provides confidence that this key, critical and highly-valued data will not find its way to the competition, via external or internal threats. Polymer can also protect **research and IoT-generated data** which are increasingly becoming valued assets for the manufacturer, enabling assurance of data integrity for strategic decisioning and future innovations. And in the expanding 'work from anywhere' approach that many companies are adopting, all of this valued data needs Polymer protection as it makes its way outside of the physical security of the office and network.

**PROTECTING
INTELLECTUAL PROPERTY**
